description

These devices contain dual 4-input positive NOR gates with strobe. They perform the Boolean function:

$$Y = \overline{G(A+B+C+D)}$$

(with 1X and $1\overline{X}$ of '23 left open).

The SN5423 and the SN5425 are characterized for operation over the full military temperature range of −55°C to 125°C. The SN7423 and the SN7425 are characterized for operation from 0°C to 70°C.

NOTES: A. Component values shown are nominal.
B. Both expander inputs are used simultaneously for expanding.
C. If expander is not used leave X and X open.
D. A total of four expander gates can be connected to the expander inputs.
